

3500 FLOATING TRACK

Mirage is excited to announce our new 3-piece top track for the 3500 large opening retractable!

After testing this with several dealers over the past four months we expect that this improvement will provide an increased error tolerance for installers of this product. The new top track has an outer aluminum extrusion, a connector that can flex inside the extrusion when necessary, and an insert that hangs from the connector. This design will provide a bit of flex if there is pressure on the mesh zipper due to variation in the install of distance between the tracks or variation caused by mesh irregularities.

Launching March 1st.

Available in Black and White.

(Photo of floating track below)

Floating top track gives you more flexibility and bigger margin of error when you're installing the unit.

The retaining insert is suspended with the flexible piece.

Available in black and white in 96".
